

PROBLEM SOLVER

ERADICATING NEW SEWAGE ISSUES

Problem: New challenges for solids-handling pumps are presented with the rise of stringy solids such as flushable wipes, which are becoming increasingly present in “New Sewage”.

This, along with other clog-prone solids such as feathers in poultry processing applications, plastic bags, hair, sludge, stringy material or any other debris, costs money due to increased downtime.

Solution: This can be dealt with effectively with the Gorman-Rupp Eradicator™ Solids Management System, either as a retro-fit to existing Super T Series® pumps or supplied as new in either cast iron or hard iron for more abrasive applications.

This innovative Solids Management System consisting of; a patented lightweight inspection cover allows easy access to the impeller, an innovative back cover plate incorporating an obstruction-free flow path and a new aggressive self-cleaning wear-plate that includes notches and grooves in combination with a revolutionary “tooth” designed to constantly and effectively clear the eye of the impeller.
