

PROBLEM SOLVER

PROTECT YOUR HEALTH WITH CLICK & CLEAN

BOSCH

Invented for life

Problem: Dust is a serious danger for every professional power tool user.

One of the main focuses of the HSE in the UK is the reduction of work related deaths resulting from the inhalation of RCS (Respirable Crystalline Silica) dust. Significant exposure to RCS can cause respiratory diseases including Silicosis, Chronic Obstructive Pulmonary Disease (COPD) and Lung Cancer.

Solution: The professional **Click & Clean System from Bosch** ensures compliance with statutory regulations, whilst enabling clean, quick and uncomplicated work. Components interact seamlessly providing maximum user friendliness by collecting dust where it originates, ensuring a better working view and protecting your airways at the same time.

By using the right products from the Bosch Click & Clean system, not only will you protect your health, and your power tools, but also ensure that you comply with strict health and safety regulations.

Demonstrations of the Bosch Click & Clean system are available on request via your local ERIKS Service Centre.
