ERIKS Hose Solution Solves FDA Non-Compliance Issues

Consolidation of hose products saves money

ISSUE

Sanofi Aventis, a leading global Pharmaceutical organisation, had recently been audited by the FDA. The FDA issued them with several non-compliance notices for the storage, supply and control of hoses and ductings in their manufacturing centre in Newcastle.

The main issue was the lack of product application data and the areas where the products were to be used on site. This is down to the fact that the customer was using several suppliers, all supplying different products for one application, none of which were correct.

SOLUTION

ERIKS know-how enabled them to provide a comprehensive stores and site survey, by liaising with procurement teams, Engineering Teams and stores.

ERIKS provided a one-stop solution for hose requirements by standardising all ducting requirements to one polyurethane anti-static food grade duct. This duct suits all areas of the works regardless of application, thereby removing the FDA issues of the wrong product being used on the wrong application.

The customer will make additional savings through the consolidation of products, they now only need to order one product instead of many. ERIKS large stock levels also meant that the product they needed was ex-stock, ensuring the solution was delivered quickly.

OTHER BENEFITS

- The customer no longer has to worry about the non-compliance notices
- Customer savings made through consolidation of products
- Requirements met through ex-stock levels

FURTHER COMMENTS...

By working with ERIKS, the customer can be confident that all the products supplied meet or exceed the guidelines set out by the FDA. This confidence is backed up with consistent supply and product datasheets.
