ERIKS

KNOW-HOW

ERIKS filtration services offer a unique blend of know-how and experience

Helping you to reduce costs

At ERIKS we have a team of filtration specialists dedicated to the support of filtration users and associated products. Working closely together with our partner suppliers, this team delivers a complete range of services, all with a single aim – to help you reduce your operating costs and to maintain and improve equipment reliability.

ERIKS Know How

Whenever ERIKS has the solution. And if we don't we'll design one. Our team of filtration specialists has both the knowledge and experience to apply standard filtration techniques where appropriate, or to bring flexible, innovative thinking to bear on the problem.

- Environmental air filtration (HVac)
- Dust & fume control
- Hydraulic filtration
- Compressed air
- Process filtration – water, chemical, food, pharma
- Automotive and engine

Understanding your needs

Our understanding allows us to define system cleanliness requirements and to ensure they are met through the application of appropriate filtration and fluid conditioning services. Our auditing and benchmarking procedures are fully compliant with industry Best Practice.

- On-site fluid sampling and analysis
- Full laboratory services
- Design, application and troubleshooting support
- Diagnostics, purifier and off-line filtration units
- Tailored 'filtercare' support packages
- Commodity management and integrated supply

Why selecting the correct filtration system is essential

Contaminants cause more than 70% of premature failures. If not controlled, these microscopic particles can significantly reduce hydraulic system efficiency. System efficiencies may be reduced as much as 20% before it is recognised that something is wrong. Contamination affects hydraulic systems in many ways.

- Corrosion of hydraulic systems from fluid breakdown and mixing of incompatible fluids
- Increased internal leakage lowering pump, motor, and cylinder efficiency
- Sticking of parts due to sludge or silting
- Seizure of parts or components caused by large amounts of contaminants lodged in clearances

ERIKS Offer:

- Full range of leading-brand products
- Impartial problem solving expertise
- Productivity and cost improvement programmes
- Training and support from your local service centre
