

# Make your mark

IF YOU'RE LOOKING FOR A QUICK, SIMPLE AND LONG LASTING WAY TO MARK-UP CONCRETE, METAL AND OTHER SURFACES FOR PLANNING OR MAINTENANCE WORK THEN TWO NEW TYPES OF PAINT MARKER PENS FROM AMBERSIL MAY BE JUST WHAT YOU NEED.

The latest metal rollerball tipped Ambersil HD Paint Markers are available in six colours (black, blue, green, red, white and yellow) and use a long lasting acrylic paint. That means a stable bond to almost any surface. Just as importantly, the pigments used produce vibrant colours that won't fade over time, while the rollerball is designed to resist wear even after prolonged use on aggressive surfaces.

The second new range from Ambersil is the Solid Marker in white and yellow. This is a solid acrylic paint in a stick, which is ideal for particularly rough surfaces. The stick won't dry out and can even be sharpened for better effect.

# Above ground

AN INNOVATIVE PUMP MONITORING AND CONTROL SYSTEM FROM GRUNDFOS LOOKS SET TO MAKE THE INSTALLATION, REFURBISHMENT AND MAINTENANCE OF PRIVATE SEWAGE PUMPING STATIONS SAFER AND MORE EFFICIENT.

The 230V Atex approved AUTOADAPT system allows external pump sensors, switches and cables to be eliminated as these are now safely integrated within the Grundfos pump assembly. This is quick and simple to fit – just plug in and pump – and can easily be connected to remote SCADA or building management systems.

AUTOADAPT is an intelligent pump, capable of automatically adapting to conditions in the pit, the presence of other pumps, and of self-diagnostics with features such as an automatic anti-seize test.

The new Grundfos system is ideal for submerged, free-standing installations or those with auto-coupling systems and is available in a wide range of specification.

# Ratchet up!

NEW FROM WERA IS THE JOKER RATCHETING COMBINATION WRENCHES, AVAILABLE IN 10, 13, 17 AND 19MM SIZES OR AS A 4-PIECE SET.

The Joker makes maintenance and engineering work quick, simple and precise. Manufactured from tough chrome-molybdenum steel and with a nickel-chrome coating, the new wrench ensures a long service life, with excellent resistance to wear and corrosion.

The ratcheting feature and ring end incorporate a precision fine tooth mechanism for greater flexibility, even in confined working spaces. The holding function allows

nuts and bolts to be held securely and positioned exactly where they are needed, with fastening onto the thread being quick and simple, and no more time wasting searches for dropped nuts and bolts.

# Under pressure

The latest pressure sensor from Festo, the SDE3, is ideal for accurate monitoring of compressed air systems, for both relative and differential pressure.

Compact, fitting an H-rail, front panel or wall mount, and with a single connector, the SDE3 is quick to install.

A large, high contrast, two-colour LCD with intuitive user menus makes the new sensor easy to set-up and operate, while alphanumeric and bar chart displays help both to minimise commissioning and training costs, and to make the SDE3 ideal for TPM (total productive maintenance) tasks.

# Quick cure

LOCTITE 3090 is two-part instant adhesive that cures to handling strength in seconds. 3090 offers a unique capability for filling gaps on a wide range of substrates including, most plastics, steels and even porous materials such as wood and leather.

LOCTITE 3090 has a low bloom and is transparent when dry, making it ideal for applications where appearance is important. After curing, the adhesive can be sanded, polished and even painted.
