

Advanced Lubrication Services

Where confidence in your productivity is important, ERIKS can ensure your plant is correctly lubricated 24 hours a day, seven days a week, leaving you free to focus on other key tasks.

The advanced integrated program for single point lubrication means we:-

1. Survey to understand the need of the application and specify the required lubricators and accessories
2. Install the units and all required accessories
3. Set the dispense rate and monitor closely over the initial operating period, adjusting if necessary for optimum performance

4. Produce a lubrication schedule, returning periodically to monitor performance and replace units when fully discharged

This can easily be integrated with other preventative maintenance services offered by ERIKS such as condition monitoring and thermography to form a complete machine maintenance program tailored to increase your asset reliability and maintenance efficiency.

ERIKS

SINGLE POINT LUBRICATION
Safety – Simplicity – Performance

Added life and performance with *simplicity*

Using simple automated lubrication systems, a range of greases and oils can be applied directly to where it is needed in a controlled and economical manner removing the need for you or your team to gain regular access to awkward or dangerous locations and without stopping the machine.

The risk of your bearings suffering premature failure is removed as the dispensing rates are easily adjustable to match the application. Applying the correct amount of lubricant also decreases usage and therefore your cost.

Depth and breadth of experience

The Simalube system from ERIKS is quick to activate with a simple twist of the dispensing dial located on the top of the canister which can be altered at any time. The lubricant level is simply monitored through the inspection window. Simalube is ideal for demanding applications such as lubrication points in difficult to reach locations or within dangerous production zones improving plant safety.

Remove the worry

Simalube is especially well suited for lubrication points which may easily be overlooked or forgotten. These often critical lube points are provided a consistent stream of lubricant reliably and automatically, 24 hours a day for up to a full year. Damages caused by over or under lubrication, and the high costs associated with repairing them, can be removed with Simalube.

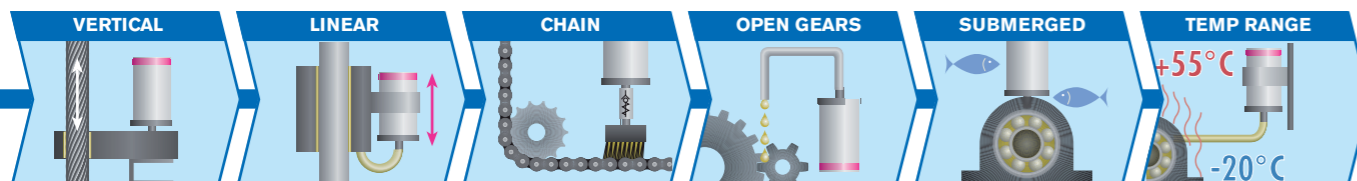

Operational Benefits

- Sealed system stops contamination associated with other forms of lubrication including grease guns
- Sealing arrangements are protected from over greasing
- Lubricate while your plant keeps working
- Zero contamination of surrounding areas or products
- Improved health and safety as operators do not have to access high or dangerous areas
- Steady regulated flow to stop feast and famine lubrication
- Automated system to all points improving consistency
- Easy disposal, seconds to separate the battery from the plastic container, no chemicals requiring special disposal
- Simple, quick replacement saving time and labour costs
- Full range of accessories to build complete systems and remote locations up to 0.5 metres

Application Range

Simalube is available with a wide range of standard greases or oils and customer specified lubricants can also be used. The dispensing time is variable between one and twelve months and works reliably throughout a temperature range of -20 to +55 °C (-4 to +131 °F). Simalube is universally adaptable to most lubrication tasks through the use of the available accessory programme.

"The most comprehensive range of lubrication products available"
