Submersible Pumps for Sleepers

ERIKS correctly specify submersible pumps for Aggregates client

ISSUE

ERIKS client, a manufacturer of railway line sleepers, had received a quote for a submersible pump to remove wash down / rain water from a polishing pond on site. A competitor had already offered a pump for this application a submersible macerator pump.

The client had concerns over the offer and asked ERIKS Pump Technology for a second opinion. ERIKS advised the client that this was clearly the wrong pump for the application, as macerator pumps are ideal for use on soft solids not in an aggregates environment.

SOLUTION

ERIKS Pump Technology correctly specified a 2" submersible contractor waste water transfer pump; fitted with silicone carbide mechanical seals, design for these harsh environments.

As well as the client being happy with the support and technical advice given, the cost of the correct submersible was considerably less than the pump incorrectly offered.

A win / win for the client and ERIKS demonstrating its technical expertise on site.

OTHER BENEFITS

- A significant saving was achieved on this application, and ERIKS successfully assisted the client in installing the correct pump in this application, preventing failure after a short time.

FURTHER COMMENTS...

This application is an excellent example of how ERIKS Pump Technology look at applications and are able to advise on a wide array of systems, identifying the right product for the application.
