Bearing Manufacture Saves the Day

ERIKS ability to manufacture bearings allows repair of drive unit

ISSUE

The customer, a large pharmaceutical ingredients manufacturer contacted ERIKS Technology Centre for Gearbox Repairs to dismantle and repair a large cooling tower mixer drive unit. ERIKS ordered all the required components, unfortunately the worm line location bearing was not available, and the soonest it would be available was 8-10 weeks. This was not acceptable for the customer as the repair was quoted on a short lead time.

SOLUTION

ERIKS contacted its bearing manufacturer, Revolve, part of the ERIKS Core Competence Centre for Bearings and explained the situation. Revolve assessed their stocks and manufacturing capacity and the required imperial bearing was manufactured within a few days. The drive unit was successfully overhauled, within the quoted lead time with no inconvenience incurred by the customer.

OTHER BENEFITS

- Ability To Manufacture Obsolete Bearings
- No Disruption To Original Quoted Lead Time
- In House Facility

FURTHER COMMENTS...

This solution demonstrates the ability of ERIKS to meet the customers needs from distribution to manufacturing capability to technical expertise.
