## Air Leak Survey Identifies Savings

Savings for confectionary manufacturer

### ISSUE

ERIKS UK were asked by one of their customers, a leading confectionary manufacturer in the UK to carry out an air leak survey on one of their sites to identify areas for savings.

### SOLUTION

Utilising the latest ultrasonic leak detection equipment, ERIKS were able to identify numerous compressed air leaks across the site. The leak detection equipment provided a fully detailed report with Db ratings and leakage volumes.

Moving forward ERIKS will be working closely with the customer to eliminate the air leaks identified, many of which are simple and relatively low cost alterations, which will result in significant cost savings.

### OTHER BENEFITS

- Identification of compressed air leaks allows for repairs to be carried out
- Future Reduction of Air Consumption
- Future Reduction in Energy Costs

### FURTHER COMMENTS...

With the Air Leaks now identified, the customers' maintenance team together with a member of the ERIKS Fluid Power Team can now work in partnership on reducing the number of leaks across the site.
