Fenner PowerTwist Keeps Food Frozen

Emergency belt keeps thousands of pounds of stock cool

ISSUE

A frozen food distribution centre were experiencing a breakdown on the belt drive in their chiller unit, and contacted their local ERIKS Service Centre for urgent assistance.

SOLUTION

The Service Centre ordered the large SPB belts from the ERIKS Distribution Centre, and arranged a taxi to get the products to the customers on an urgent basis.

In the mean time, with frozen stock at risk of thawing, the Service Centre suggested that the customer use a B section Fenner PowerTwist while they were waiting for the replacement product to arrive.

Although the Fenner PowerTwist power ratings are only equivalent to vee belts, it was more than enough to keep hundreds of thousands of pounds worth of stock at -28°C until the SPB product arrived.

OTHER BENEFITS

- State-of-the-art solution for emergency replacement
- Can be made to any length in minutes
- No special tools required
- Adaptable to any drive
- Water, chemical and oil resistance

FURTHER COMMENTS...

Even though PowerTwist has many attributes other than being an emergency belt, it certainly saved us 1000's of pounds and turned disaster into triumph

Distribution Centre, Maintenance Engineer
