Sedis Delta Z - The Toughest Solution

Four times the life of stainless steel chains

ISSUE

In one food application, stainless steel chains were only lasting about six months before they stretched too much to be used, and were very expensive to replace. So the company called ERIKS for a suitable solution.

SOLUTION

After contacting the local ERIKS service centre they recommended that the application would be better suited to Sedis Delta Z chains which are the ideal solution for use in arduous and abrasive environments, where chain is operating at high speeds or where maintenance is difficult. Offering increased resistance to wear, they deliver improved resistance to corrosion in wet and humid conditions.

The chains were installed and the customer has achieved two years life from the Sedis Delta Z chain - 4 times the life of stainless steel chains. Saving over £111,000 in lost production and replacement costs.

OTHER BENEFITS

- In-house technical knowledge to provide a reliable solution
- Full technical back up and on-going support
- Dramatically reduced downtime

FURTHER COMMENTS...

Delta Pin chain has been proven over many years, and provides an increase in chain life across a wide range of applications. The chain is available from 3/8" - 1.1/2" pitch and some larger-pitch chain are also available. Call ERIKS for advice on what product best suits your application
