Fenner

Fenner Geared Motors increase uptime

Customer standardises on Fenner after positive experience

ISSUE

The customer, a large food and beverage manufacturer was experiencing issues with a lot of their conveyor drive units failing and to make matters worse, replacements were on long lead times, adversely affecting uptime.

SOLUTION

Russ Horrigan, and ERIKS Drives Technical Specialist, was invited on-site to look at an array of the conveyor drives, identify the issues and redesign the problems out.

It appeared that many of the drives from the OEM had been underrated, or more likely, the demand from the user had increased over the years.

Russ looked at each application on a case by case basis, and suggested that the Fenner Geared Motor range would be best suited to the current conveying applications.

OTHER BENEFITS

- Problematic conveyor drives redesigned for reliability
- Impartial technical support
- Reliable, rugged product from the Fenner range

FURTHER COMMENTS...

The customer was so impressed with the technical support and the solution he received, he has now standardised his engineering department to accept only Fenner drives from ERIKS.
