

Summary

Industry:	Chemical
Application:	Bi-Planar Overhead Conveyor Chain
Actual Saving:	£5228
Payback Period:	12 months

Bespoke Chain Solution Delivers Savings

Chain specially manufactured to meet requirements

ISSUE

A large company is involved in the specialist anodising industry. As part of the manufacturing process there is a Bi-Planar chain which, at 390m long, traverses the factory at height.

Initially the customer wanted to purchase the full amount and replace during a one-off shutdown. However, due to budget restrictions the customer was looking for a way of replacing the chain over a longer time period in line with standard maintenance work.

SOLUTION

Working closely with our chain manufacturing partner we came up with a product which matched the new requirements of the company: This included a slightly altered chain construction, with a newly designed cross member to help with their lubrication requirements.

ERIKS Blackburn agreed, with a covering order, to hold 10 lengths of 3.25m in stock locally which helped with customer in working capital reduction, delivery lead-time improvement and cost reduction.

OTHER BENEFITS

- Working capital Reduction
- Transactional Cost Saving
- Improved Delivery Lead-time

FURTHER COMMENTS...

The flexibility of the service centre in providing a suitable solution for the customer has secured long term business.
