Motor Asset Register

ERIKS provides customer with register of 1,175 motors

ISSUE

A large Steel Manufacturer in Scunthorpe was faced with the onerous task of identifying 1,175 electric motors within two separate stores locations. ERIKS Electro Mechanical Services based in Chesterfield were contacted by the customer to evaluate the situation.

SOLUTION

ERIKS have significant experience in capturing information from old and redundant stores to enable sound commercial decisions to be made in respect of store, replace or disposal. Two ERIKS personnel were seconded to the facility to capture all relevant information in an agreed format. As a result, the customer now has a full asset register of all motors held within the stores, identifying useable stock with full descriptions, items to be repaired and finally, items which could be disposed of thereby reducing stores inventory.

OTHER BENEFITS

- A clear picture of asset, with information on what can and cant be used
- Opportunity to reduce capital tied up in stock
- Ensures all motors are in working order, reducing the possibility of downtime

FURTHER COMMENTS...

The customer was pleased with the professionalism and efficiency of the ERIKS team.
