Fenner

Recycling for the Future

Fenner gearboxes ensure continuous operation

ISSUE

A West Midlands recycling plant had just installed a new machine, but due to the nature of the business and continuous use of the machine, they had concerns on breakdown situations and the implications of any prolonged downtime, so were looking for a spares package to cover the whole machine.

SOLUTION

Nigel Jones and Stuart Iles from the ERIKS Core Competence Centre for Drives visited the site and conducted a detailed survey of the machine in question and identified that supplying 43 gearboxes would cover the entire machine.

ERIKS were able to supply Fenner geared motors which covered 80% of their requirement and were despatched from stock at Dudley. The other 20% was covered by the original OEM gearboxes, also supplied by ERIKS, albeit on a slightly longer lead-time.

OTHER BENEFITS

- Detailed machine surveys using in-house engineers
- Fenner product available from stock
- Complete spares solution

FURTHER COMMENTS...

The customer was extremely pleased with the quick and professional service provided and now contacts the local service centre for all their requirements.
