ERIKS Coupling Centre Save the Day

In-house coupling expertise prevents extended breakdown

ISSUE

The local ERIKS Service Centre received a call from a large quarrying customer based in at Meriden requiring assistance on a breakdown for a coupling driving their main 75Kw Barrel drive.

SOLUTION

The branch contacted their local drives specialist who went to look at the application the same day. The existing coupling was on a very long lead time, but the customer needed to get the plant up and running the following day.

Using the expertise of our Couplings and Drives division they were able to select a 1040G20 double engagement unit which was delivered the following day to get the plant back up and running saving thousands in downtime.

OTHER BENEFITS

- In-house coupling expertise
- Local drive specialists available to assess the application requirements
- Readily available stock

FURTHER COMMENTS...

With the support of our dedicated in-house coupling centre we were able to solve the customers problem and get him back up and running with a suitable solution very quickly.
