Quick Release Coupling Provide Quick Solution

Increase application reliability and efficiency

ISSUE

The customer was experiencing an on-going problems on their pallet assembly line, where they repair the old and broken pallets once they are returned to the factory.

They use a variety of air tools, from impact wrenches to nail guns and are changing each tool many of times during the working day. They were reoccurring instances where the air tool was coming unattached form the coupling, the tools being used are constantly being pulled and dragged in such a harsh working environment.

SOLUTION

After an initial visit ERIKS suggested using Cejn Quick release couplings along with an adaptor as an alternative to the existing brand. These couplings provided the customer with an instant improvement. Not only had they stopped the air leaks, but the operators found them more stable and secure - instilling a confidence that the air tool would not no longer keep coming unattached.

OTHER BENEFITS

- Increased Reliability
- Stopped Air Leaks

FURTHER COMMENTS...

After the initial trial and successes we have now changed all the couplings on each of the pallet lines, resulting in greater reliability. In addition we have a big cost savings on the air leaks.
