Automatic Lubricators from Simatec Simplfy Maintenance

Eliminating costly manual weekly lubrication schedules

ISSUE

Thomas Hardy a brewery and bottling plant had a bank of grease nipples to lubricate numerous moving parts on their bottling filler. These all had to be manually topped up on a weekly basis - some points used more grease than others.

SOLUTION

After demonstrating the benefits of the Simalube automatic lubrication system to the customer, he was very impressed with the time it would save on weekly maintenance schedules.

With this in mind the customer placed an order with ERIKS to make a manifold to fit 13 lubricators, hose and connections. This means that they don't have to manually grease the nipples every week as each Simalube could be set to an individual flow rate.

OTHER BENEFITS

- Grease usage is easier to monitor.
- Reduces maintenance costs
- Regular, scheduled lubrication

FURTHER COMMENTS...

The chance of lubrication being missed has now been eliminated and has given the filler a cleaner tidier look.
