Pump Hire Solves Problematic Pumping

ISSUE

ERIKS deal with a broad array of customers and customer requests. In this instance a small shipping port on the south coast were using a rapidly wearing out sullage pump. This pump was required for pumping out the bilges of ships coming along side to bulk storage tanks within the port.

The port had not allowed within its budget for the replacement of this vital piece of equipment, so ERIKS suggested hiring out a suitable pump on a short term lease.

SOLUTION

ERIKS offered a 4" Selwood Spate PD100 pump, mounted on a portable wheeled trolley, complete with diesel engine drive.

The hire of pumps is not an everyday occurrence for ERIKS Pump Technology but we are happy to accommodate customers specific requests.

OTHER BENEFITS

- Savings were achieved on this application, by enabling the port to continue operating.

FURTHER COMMENTS...

No company in the UK can match ERIKS geographical coverage for pump services, encompassing new product services and repairs, our pump division is run by and operated by people who combine dedication to customer support with years of experience in areas which range from abstraction of water through food & beverage to chemical and process. Ultimately it is the know-how of our people that make the difference.
