## Emergency Pump Replacement Saves £15k

Alternative pump solution from ERIKS reduces plant downtime

### ISSUE

A manufacturing plant under contract to an ERIKS workshop for repair services operated a small American made Dickow multistage pump. This particular pump had failed and the site did not carry a spare.

The pump was returned to the ERIKS workshop where the pump was assessed and quickly deemed beyond economical repair. The workshop contacted ERIKS Pump Technology for support, as the pump in question, although still available was being offered on a long lead time. This lead time of some weeks did not match the client's requirements of having the plant working by the weekend.

### SOLUTION

A Lowara ESV vertical multistage pump was identified as being the best pump to replace the Dickow pump, although dimensionally not the same, the client was happy with making the required pipework modifications to install the new proposed pump.

The pump was ordered from stock at Lowara's Axminster facility and supplied on an overnight carrier. This pump was received on time and installed to the satisfaction of the customer.

### OTHER BENEFITS

- Lowara ESV pumps are stocked at Axminster or can be built to order.

### FURTHER COMMENTS...

This application is an excellent example of how ERIKS Pump Technology are able to advise on a wide array of systems, identifying the right product for the system / application, and look for any additional savings that can be achieved.
