

Summary

Industry:	Paper and Board
Application:	Paper Slicer
Actual Saving:	£4,845
Payback Period:	1 year

Reliability Issues Solved with Festo

Whilst providing significantly reduced lead-times

ISSUE

A large paper processing company was experiencing problems with their paper slicing machine. The problem was two fold, firstly the incumbent rodless cylinder was prone to ingress of dust because the protective wear strip was exposed. Secondly the PI20-80-450 contained both control valves that could only be purchased as complete units and the cost of these were in excess of £1000.

SOLUTION

After a discussion with on-site engineer it was agreed that the Festo DGC-63-450-KF, would do the same job and, without inclusion of valves would reduce the overall costs on each unit.

An order was placed for the first unit and to date there have been no issues. Two more orders have since been placed providing the customer with an overall cost saving of £4845.

OTHER BENEFITS

- Significantly reduced lead-times, now days not weeks
- Readily available spares
- Quality, reliable brand

FURTHER COMMENTS...

The customer now has the confidence to switch across to Festo products, which have proved to be very reliable and very cost effective.
