## Cylinder Retro Fit

ERIKS solve steel customers problem

### ISSUE

A large steel manufacturer in Scunthorpe asked ERIKS to look at the possible modification to an existing cylinder to enable the cylinder to be manually closed in the event of air failure.

The inability to manually close the cylinder would result in lost production time.

### SOLUTION

Working in conjunction with a local engineering company ERIKS were able to design and retro fit a manual closing wheel to the rear. This required modification of the end cap and piston. The new cylinder was ordered and fitted in July.

### OTHER BENEFITS

- Existing product improvement
- Potential downtime reduced

### FURTHER COMMENTS...

The customer was impressed with the work done and quick turnaround of the job.
