ERIKS & Grundfos Join Forces for Pump Training

Practical, hands-on training for best practice removal, strip-down and reassembly

ISSUE

A large dairy company contacted their local ERIKS service centre with a view to conducting bespoke product specific training on the Grundfos range of pumps, to raise awareness of the extensive ranges available. HILGE pumps used extensively around the plant.

SOLUTION

ERIKS and Grundfos jointly presented range specific to the dairy industry, outlining experience of problems faced by other customers in similar industries.

Technical experts from both ERIKS and Grundfos attended the training which involved a session in the workshop with a HILGE pump to demonstrate best practice for removal, strip-down and reassembly of the pump.

This was followed by an opportunity for the dairy engineers to put into practice the lessons learned during the session. The training was delivered over two days to allow for changing shift patterns and allow all engineers to attend.

OTHER BENEFITS

- Increased knowledge of dairy pumps including: sanitary centrifugal pumps, hygienic design, mechanical seals and dairy specific options
- Manufacturers support for the training
- Practical session to develop skills with pumps used on site

FURTHER COMMENTS...

The dairy were very pleased with training that was supplied across the two days, which allowed their engineers a practical hands on approach.
