Actual Saving:	£undisclosed
Payback Period:	undisclosed

Alternative pump solution avoids costly downtime

In-house technical support proves invaluable

ISSUE

The gear pump that supplied gas oil to an asphalt plant had failed, a replacement was required urgently to ensure production was not affected. The original manufacturer was unable to supply a replacement in the time required.

SOLUTION

The existing pump performance was determined, however the solution selected would mean a minor pipework alterations would have to be made in order to fit the alternative pump.

The asphalt plant were happy to make the necessary alterations to get up and running quickly. The pump was duly ordered, arrived the following day, keeping downtime to a minimum.

OTHER BENEFITS

- Alternative efficient solution sourced quickly
- The client was able to keep his plant operating
- In-house technical application engineers

FURTHER COMMENTS...

The pump was delivered in the required time frame and the plant did not lose production time.
