ERIKS help source automated solution for national bakery

Consolidating suppliers, improving the process

ISSUE

The Engineering Manager of an East Lancashire national bakery was looking to automate the depositor times on his pancake plant. He decided the best way to achieve this would be by introducing a viscometer in the pipework, this would measure the viscosity of the mix in the line to prove consistency. The bakery engineer had already sourced a supplier who could supply the product to meet the requirements of the project.

SOLUTION

Following a recent national contract win, ERIKS were asked to get involved to process this order via our local service centre. As well as sending a RFQ to the agreed supplier we also searched for other potential suppliers offering the same specification of viscometer to see if there were added value benefits for the customer.

Not only did we find a supplier who was willing to visit site to ensure the viscometer was correctly specified, we were also able to show the customer a large percentage cost saving in the process.

OTHER BENEFITS

- Cost Saving
- Supplier Reduction
- Site Support

FURTHER COMMENTS...

The customer received the viscometer within the agreed timeframe in order to fit during the next available maintenance window.
