

### Summary

<b>Industry:</b>	Food - Bakery & Cereals
<b>Application:</b>	Water Circulation Pumps
<b>Actual Saving:</b>	£14,047
<b>Payback Period:</b>	1.6 years

## Efficient pumping solution reduces waste

In-house technical expertise increases efficiency

### ISSUE

A large food company were experiencing problems with their current water circulation pumps which are over sized for the required duty.

The pumps are producing too much of a flow of water around site, the excess water just circulates throughout the system, wasting unnecessary power.

### SOLUTION

A pump audit was undertaken by ERIKS to ascertain the actual duty of the existing pumps. Once this data was analysed, a suitable alternative was duly specified.

The new pumpset comes equipped with the latest inverter technology and the most up to date, hydraulically efficient pumps on the market.

The combination of the two provides a reliable, cost effective solution to the problem experienced by the customer. After capital investment the payback time will be 1.6 years.

### OTHER BENEFITS

- Efficient pumping solution
- Reduced energy consumption
- In-house technical expertise

### FURTHER COMMENTS...

After capital investment the payback time will be 1.6 years.
