ERIKS Easy Order System

Stores Management Solutions Increase Efficiency

ISSUE

A large packaging company in Grimsby had issues with the time it was taking to check and re-order stocks in their stores.

In addition to the extended time it was taking checking and re-ordering stocks, they were also spending vast amounts of time contacting the local service centre to source items which sit outside their normal stock holding. A call was made to ERIKS to discuss ways in which they could help improve current processes and streamline their ordering system.

SOLUTION

The first step was to install the ERIKS Easy Order system which allows the customer to use a barcode and scanner functionality, this increased the efficiency of the stock management and re-ordering process in addition to being quick and simple to use.

Access to the full ERIKS product catalogue also gave the customer the opportunity to purchase additional products they previously did not know ERIKS offered, allowing them to streamline their supplier base and reduce transactional costs.

OTHER BENEFITS

- Stock Visibility
- Access to Product Information
- Control and Compliance
- Ease of Use

FURTHER COMMENTS...

The Stores Manager on-site commented "The ERIKS Easy Order System is great for us as a company. It provides us with full visibility and instant access to a much wider ERIKS offering, allowing us to save time and money sourcing consumables. The barcode and scanner functionality has certainly streamlined our stock management and ordering process".
