<b>Payback Period:</b>	undisclosed

## Condition Monitoring Package Improves Reliability

Failure mode analysis of critical plant increases performance

### ISSUE

A large cereal manufacturer was experiencing frequent failures of equipment in remote areas of their site.

They were repairing assets through a third party who didn't provide any explanations of failure modes, and preventative measures that should be taken.

### SOLUTION

Following an in-depth consultation with the site engineers ERIKS were able to offer a condition monitoring package to monitor the plant on a regular basis.

Any items identified in critical condition could easily be removed for repair and failure analysis before catastrophic failures occurred costing the manufacturer dearly in lost production.

ERIKS have now secured an annual order for vibration analysis and thermography, with repairable items now going to the local ERIKS repair workshop.

### OTHER BENEFITS

- Application Expertise
- Predictive Maintenance
- Increased Equipment Availability

### FURTHER COMMENTS...

The customer has increased plant productivity and reliability through ERIKS preventative maintenance expertise.
