Industry:	Food - Bakery & Cereals
Application:	Split Roller Bearings
Actual Saving:	£1,500
Payback Period:	N/A

ERIKS increase reliability through change to Revolve SRB

Training delivered to staff by ERIKS on installation of the Revolve SRB

ISSUE

A leading food manufacturer traditionally used a competitor's Split Roller Bearings on site.

At first the customer was apprehensive to change to Revolve's SRB (Split Roller Bearing) due to application issues.

SOLUTION

Once these application issues were resolved, the Revolve SRB was given a trial, under the request from the customer, before changing from the competitor's bearings to Revolve bearings.

Following this one of ERIKS' Bearings Application Engineers delivered a trial Split Roller Bearing course to some of the customer's staff. The training was delivered to a selected group of engineers to assess the suitability and extol the benefits of the SRB products and the requirements for the bearings installation over the competitor's product.

OTHER BENEFITS

- Know How
- Application Solutions
- Product Conversion
- Training
- Increased Reliability

FURTHER COMMENTS...

The training was delivered at a cost saving of £1500. This has subsequently led to further training being delivered and application improvements being investigated.
