ERIKS design and deliver a successful training package programme

Both the management team and the trainees give positive feedback

ISSUE

A large food manufacturer was undertaking a site-wide initiative to improve the reliability of equipment in its production site.

ERIKS were approached to design a training package for the reliability-centred maintenance of bearings.

This was organised to train the control room operators on how to spot potential problems on their periodic line walks.

SOLUTION

ERIKS worked closely with the customer to include content which was of particular value to them.

The idea was to start from the very basics and apply the training to real examples they may come across. This included physical examples of failures and ways to spot issues and prevent them from happening.

Over 40 training sessions were delivered over a 3 month period. The feedback from both the customer's management team and the trainees was overwhelmingly positive.

OTHER BENEFITS

- Reliability
- Training
- Know+How
- Positive Risk Reduction

FURTHER COMMENTS...

The ERIKS' trainer received a personal commendation from the clients Technical & Reliability Manager.
