## ERIKS Provide an Automation Solution

ERIKS Ensured Efficiency and Performance are Improved for a Suction Lift Application

### ISSUE

ERIKS Pumps division were asked to look into an ongoing issue for a customer in the Kings Lynn area.

The customer had a pump installed on a suction lift application within an ATEX-zoned area and was experiencing priming issues whenever the pump was called into service.

The pump was used to transfer washdown water with traces of Ethynol. It was manually operated, very labour-intensive and unreliable for the customer.

### SOLUTION

ERIKS selected and specified an ATEX self-priming pump along with level control system which automated the system and removed the need for manual priming.

ERIKS experts in the Kings Lynn and Norwich workshops added value by carrying out pipework modifications.

Since installation the customer has confirmed that the installed pump has delivered improved flow rates and reduced the maintenance required on the application.

### OTHER BENEFITS

- Automation
- Reduced Maintenance
- Improved Flow Rates
- Improved Efficiency

### FURTHER COMMENTS...

The customer confirmed the improved application performance and the decrease in maintenance required.
