ERIKS Design and Deliver a Compressed Air Survey

ERIKS Provided a Quick and Cost-Effective Way to Find and Repair Leaks

ISSUE

As with a lot of other manufacturing sites, compressed air is used throughout the customer's facility. Although compressed air is a costly commodity, it is rarely the reason for production to stop. This is why repairs to the system often come lower down on the list of priorities and are often left for a long time, causing additional costs.

SOLUTION

ERIKS brought together internal divisions to offer a compressed air detection service that repaired leaks as the survey was done. This was all done on the same day in line with the customer's shutdown schedule.

Validating savings from the readings before and after using the acoustic monitoring equipment were conducted and incorporated into a quality report which was provided to the customer to track the benefits and savings of the programme. Based on the success and savings achieved, the customer has requested additional surveys take place on an ongoing basis.

OTHER BENEFITS

- Turn Key Solution
- Minimal Disruption
- Energy Savings
- ERIKS Know-How

FURTHER COMMENTS...

The customer was pleased with the project outcome and requested additional surveys to take place on an ongoing basis.
