ERIKS Improve Lubrication Products System

ERIKS Know-How Upgraded the Outdated Lubrication Products On-Site

ISSUE

A leading food manufacturer stocked a number of lubricants on-site which were a legacy from a dedicated lubrication contract many years ago.

With developments in food grade lubrication technology, and the customer's focus on asset reliability, the company decided to revisit the lubricants used in the facility.

SOLUTION

A non-food grade synthetic hydraulic oil was converted to a food grade product from another range. Looking carefully at the specifications with both the lubricants sales engineer and the ERIKS application engineer, both products were compatible without the need for a full system flush when they were changed.

A second product, which was already a food grade, was also able to be changed to a product from the chosen brand. This also contributed for a price benefit and was also able to be mixed with the original product without any engineering downtime.

As a result of the technical knowledge of the ERIKS lubrication team and the engagement of partner suppliers, we were able to provide the customer with a food grade lubrication solution which increased food safety without engineering downtime.

OTHER BENEFITS

- Food Safety
- Cost Reduction
- Miscible Products
- Reliability
- Technical Know-How

FURTHER COMMENTS...

ERIKS Know-How ensured a lubrication solution was provided to the customer.
