ERIKS Solve a Pumping Problem for a Food Manufacturer

The Solution Was Provided in Less Than a Day, Preventing Downtime

ISSUE

A food manufacturer approached ERIKS to solve a pumping problem on-site.

A new chiller unit for the control panels had been installed and wasn't working correctly. The pump that had been specified by the OEM in Germany was vastly undersized and wasn't delivering the sufficient duty to enable the chiller to work.

SOLUTION

ERIKS visited the site to obtain the necessary information to resize the correct pump. It was ordered immediately and delivered to the customer the next day.

The pump ERIKS provided prevented the customer's control panels from overheating and causing lack of production costs. This also reduced the Health and Safety risks as without the correctly sized pump, the site had to keep the panel doors open to provide cooling in the interim.

OTHER BENEFITS

- Know-How
- Positive Risk Reduction
- Reliability
- Prevented Downtime
