## ERIKS Conduct a Pump Survey for a Pharmaceutical Company

The Survey Outlined Unidentified Spares Which Helped the Company Reduce Risk

### ISSUE

A pharmaceutical company approached ERIKS to review the pumps on their critical CIP line. The site had no contingency built in to the system or spares. Without this the site was vulnerable and would result in major production downtime should a failure occur.

### SOLUTION

ERIKS conducted a pump survey of the area and produced a document which detailed all the production pumps along with the replacement pump models and spares kits required. Some unidentified spare pumps have also been reviewed and matched up where possible.

The survey clarified where the site was vulnerable and triggered an order for the spare pumps required. Furthermore, a cost saving was provided by highlighting the relevant pumps for the relevant areas already existing on-site.

### OTHER BENEFITS

- Technical Know-How
- Positive Risk Reduction

### FURTHER COMMENTS...

The customer is very happy with the results and has peace of mind should any failure occur in the future.
