ERIKS Pump Experts Ensure a Quick Pump Solution for a Brick Company

ERIKS Specialists Provided the Solution on a Significantly Improved Lead Time

ISSUE

A critical existing dosing pump had failed on start up for a brick company and the three spares on-site were all under repair.

The site had been mothballed for several years, but was being brought back up to working order and production was about to commence. These pumps were needed in a vital piece of the production line which meant they couldn't start to produce until this issue was resolved.

SOLUTION

The replacement of the original pump and spares to fix the existing pump were on a 6 week lead time due the bespoke nature of the duty and application.

ERIKS specialists managed to quickly find a suitable solution which met all the site's requirements and could be delivered to site with an improved lead time of 1 week. In addition, the design of these was improved so that they can be used with both types of oil that are predominantly used on-site.

OTHER BENEFITS

- Technical Know-How
- Time Saving
- Reduced Lead Time

FURTHER COMMENTS...

The customer was very happy with the solution and is now willing to replace other existing pumps on-site.
